+90 commercial offices

15 factories (306.200 m²)

+90 Designers

+190 Engineers

+4000 people at your service

HMY
the innovative shopfitter

BACK PANELS

ABP: ADVANCED BACK PANEL

This 1x1 removable back panel is positioned in the front part of the upright and can be installed and uninstalled without completely disassembling the piece of furniture. This is very useful when doing a remodelling or partial refurbishing in the shop.

We have added improved elements such as a longitudinal groove system and reinforced clasps, doubling the thickness of the ends to offer a more compact and rigid panel that provides an exceptional service regarding furniture solidity and stability and making the element more attractive, exclusive and modern, which is also important.

Last, its functional service has been improved and it is lighter, which make it easier to handle and assemble.

SBP: SINGLE BACK PANEL

It is installed between the uprights, into the part that is hidden and has no other use, when using a frontal panel. All this space is gained for more products!

The most important advantage of SBP is that in a space for 12 gondolas with frontal panels, one more can be installed, gaining capacity to display products and keeping the same room for the corridors that are characteristic of a layout with linear structures with 500-mm depth shelves.

Fewer panels and more space for selling products, a profitable solution.

SLIDING BASE

This new product has the aim of improving ergonomics in the work place. It is devoted to easing the product implementation into the linear.

The admissible load on a standard shelf is maintained but physical risks are reduced when placing the products. Our patented system allows us to avoid unacceptable postural limits.

The movement of the shelf handle reduces the access distance when placing the product.

RETAIL LAB

THE REASON OF P25 EVOLUTION

We innovate to give answers to our customer's needs

The HMY group devotes **time and effort to R&D to innovate in the retail market.**

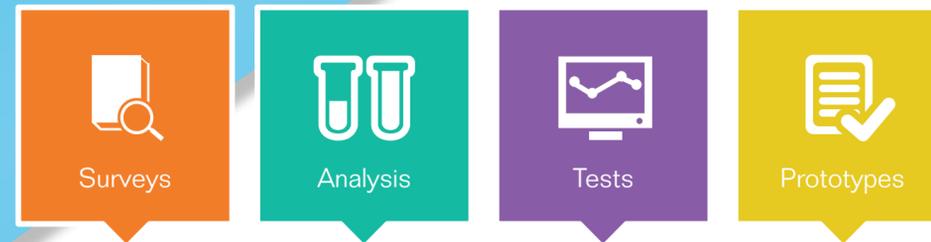

P25 Evolution was the result of years of investigation more than a decade ago to offer the customer a linear that would allow space in the sales area to be maximised.

It is a **shelving system with 25 mm step** and the intersection height of the shelves can be adjusted to several sizes.

This represents an **increase in the usable area of between 12 and 15 % in the high profitability area** in the linear, between the eyes and the hands, where 75% of impulse sales take place.

SGS-TÜV Saar – our partner for test according to EN 1990 / EN 1993 / EN 10002-1

P25 EVOLUTION
Created in 2001 by HMY

MAXIMUM USE OF THE SPACE IN EACH RETAIL PREMISE

We increase the usable space in the linear in the high profitability area

UPRIGHTS

The upright is the main element of the auto-carrying and modular shelving system. The holding elements will be installed on it and on these elements the accessories and complements, thousands of pieces that couldn't be used without the upright.

With P25-G our clients can now choose among several options according to the store layout, the commercial sector and, of course, the kind of products that the shop sells. With HMY you don't have to continue using an oversized support structure due to the lack of alternative.

P25 - G.60

For small and regular shops with a range of products that are not very heavy or with a not very dense implantation. It is the most suitable for sectors such as pharmacy, textile, perfumes and beauty, toys... It is attractive and functional and highlights the value of the product and focuses the attention of the customer on it and not on the display element.

P25 - G.75

For sectors and stores that requires high load capacity and are not large shopping centres or DIY depots. Bakeries, sports or culture shops... It is perfect in areas with large linear structures that can hold a big density of products.

P25 - G.90

Is the most convenient for stores that offer a wide range of products regarding design and weight, such as supermarkets or DIY stores. Also, electrical appliances and automobile sectors can improve their service with this robust element.
